STEF

LTT plastics (Analysis of Antigen Induced Cytokine Production)

In plastics LTT we determined a relatively strong lymphocyte reaction (type-IV-allergy) against:

- Phtalate
- Buthandiol-1-4-methacrylat

Contact with titanium, also transdermal or dental implants, should be avoided, as they might possibly trigger or maintain autoimmune processes.

With kind regards

Your Biovis-Diagnostik

Attention: *The recommendations given are only advice based on the compiled findings and possible clinical information. They are exclusively addressed to the therapist/physician and are **not intended** for direct transfer to the patient. They cannot replace diagnosis and therapy of the treating therapist. The recommendations for therapy are a suggestion. The responsibility for the final selection/measure/dosage lies with the medical professional/therapist responsible for each individual case. Please also note that there may be contraindications/interactions associated with the recommended medication/nutritional supplements for pre-existing primary diseases and when taking certain medication. These must be investigated by the medical professional/therapist before starting therapy.*
